## ROUNDUP® PROVANTAGE MAPP [15534]

A soluble concentrate containing 480g/l glyphosate present as 588g/l (43.8% w/w) of the potassium salt of glyphosate used as a foliar application for the non-selective control of emerged annual and perennial weeds in industrial, amenity situations, aquatic areas and forestry

Maximum application rates vary per weed and situation. Refer to the label for details.

Maximum number of applications per annum vary per situation. Refer to label for details.

Section	Profile
<p><b>1. WILDLIFE</b></p> <p><b>Mammals</b></p>       <p><b>Birds</b></p>	<p>Roundup ProVantage is not classified as '<i>Harmful to game and wildlife</i>'.</p> <p>Roundup ProVantage shows low toxicity to mammals. It poses negligible risk for species that feed on recently treated vegetation (e.g. hares, rabbits, deer) or consume earthworms in treated areas (e.g. shrews, voles). There is no long-term exposure to this herbicide as treated weeds are controlled and are thus no longer present as potential food sources.</p> <p>Roundup ProVantage is of low toxicity to birds. There is negligible risk to geese and other birds that could feed on recently treated vegetation. There is also negligible risk for species nesting in and around treated areas or consuming insects and earthworms from treated areas.</p>
<p><b>2. BEES</b></p>	<p>Roundup ProVantage is of low toxicity to honeybees; there is no requirement to avoid application of the product when bees are foraging on flowering weeds in treated areas.</p>
<p><b>3. NON TARGET INSECTS AND OTHER ARTHROPODS</b></p>	<p>At typical use rates, Roundup ProVantage is harmless to most species commonly found in and around treated areas, including carabid beetles and ground spiders. In areas where the herbicide is applied, the loss of vegetation will lead to habitat changes and may thereby temporarily affect arthropod populations. The arthropods will however rapidly return as vegetation re-grows.</p>
<p><b>4. AQUATIC LIFE</b></p>	<p>Roundup ProVantage is not considered as '<i>harmful to aquatic life</i>', being of low toxicity to fish, aquatic invertebrates (e.g. water fleas) and green algae.</p> <p>The product is registered for the control of emerged and floating aquatic weeds. When used as part of a weed management programme, there is low risk for aquatic life.</p> <p>In all cases where Roundup ProVantage is not applied for aquatic weed control, care should be taken to ensure that surface water or ditches are not contaminated with the chemical or used containers.</p>
