

Environmental Information Sheet

ROUNDUP Vista Plus

MAPP 18002

A soluble concentrate containing 450 g/l glyphosate present as 550g/l (42.2% w/w) of the potassium salt of glyphosate used a foliar application for the non-selective control of annual and perennial weeds before sowing or planting of all crops.

For use pre-emergence and pre-harvest in cereals and certain other crops, for destruction of grassland, and use in stubbles and orchards, non-crop and aquatic areas. Maximum application rates vary per weed and situation. Maximum numbers of applications per annum vary per situation. Refer to the label for details.

Section	Profile
<p>1. WILDLIFE</p> <p>Mammals</p> <p>Birds</p>	<p>Roundup Vista Plus is not classified as '<i>Harmful to game or wildlife</i>'</p> <p>Roundup Vista Plus shows low toxicity to mammals. It poses negligible risk for species that feed on recently treated vegetation (e.g. hares, rabbits, deer) or consume earthworms in treated fields (e.g. shrews, voles). There is no long-term exposure to this herbicide as treated weeds are controlled and are thus no longer present as potential food sources.</p> <p>Roundup Vista Plus is of low toxicity to birds. There is negligible risk to geese and other birds that could feed on recently treated vegetation. There is also negligible risk for species nesting in and around treated fields or consuming insects and earthworms from treated areas.</p>
<p>2. BEES</p>	<p>Roundup Vista Plus is of low toxicity to honeybees; there is no requirement to avoid application of the product when bees are foraging on flowering weeds.</p>
<p>3. NON TARGET INSECTS AND OTHER ARTHROPODS</p>	<p>At typical use rates, Roundup Vista Plus is of low risk to most species commonly found in and around treated fields, including carabid beetles and ground spiders. In areas where the herbicide is applied, the loss of vegetation will lead to habitat changes and may thereby temporarily affect arthropod populations. The arthropods will however rapidly return as vegetation re-grows.</p>
<p>4. AQUATIC LIFE</p>	<p>Roundup Vista Plus is not considered as '<i>harmful to aquatic life</i>', being of low toxicity to fish, aquatic invertebrates (e.g. water fleas) and green algae.</p> <p>The product is registered for the control of floating and aquatic weeds. When used part of a weed management programme, there is low risk for aquatic life.</p> <p>In all cases where Roundup Vista Plus is not applied for aquatic weed control, care should be taken to ensure that surface water and ditches are not contaminated with the chemical or used containers.</p>

Environmental Information Sheet

ROUNDUP Vista Plus

MAPP 18002

Section	Profile
<p>5. SOIL and GROUNDWATER</p> <p>Earthworms</p> <p>Soil Micro-organisms</p> <p>6. NON-TARGET PLANTS</p>	<p>Roundup Vista Plus is rapidly and extensively degraded in soil by indigenous soil micro flora, under both aerobic and anaerobic conditions. The degradation of Roundup Vista Plus is dependent on soil type and temperature but is independent of the initial herbicide concentration. Roundup Vista Plus does not accumulate in soil after several applications within one season or over the years. Roundup Vista Plus is strongly adsorbed to soil and possesses very little potential for leaching. There is a negligible risk of groundwater contamination by Roundup Vista Plus due to the high adsorption, low mobility and rapid biodegradation in soil.</p> <p>Roundup Vista Plus is of low toxicity to earthworms and will pose a negligible risk to earthworm populations in or around treated fields.</p> <p>Roundup Vista Plus has no adverse effects on soil micro flora and therefore poses negligible risk to the processes of nutrient recycling in soil.</p> <p>To avoid unintentional effects on the vegetation of non-target areas (e.g. field boundaries, conservation headlands, beetle banks), care should always be taken to minimise drift. The use of low drift application equipment and unsprayed strips is recommended.</p>

USE HERBICIDES SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE

Care must be taken to minimise the risk of surface water contamination from farmyard and field sources.
